

## **Biography**

Juste Raimbault holds a PhD from University Paris 7 in Quantitative Geography, on modeling the co-evolution of transportation networks and territories. With an interdisciplinary background in Complex Systems, his work is situated at the interface of Geography and Computer Science. He is currently a Research Fellow at the Center for Advanced Spatial Analysis, University College London, where he studies the coupling of microsimulation models with land-use transport interaction models. He is also an associate researcher at Institut des Systèmes Complexes Paris Ile-de-France, where he develops model exploration and validation methods and contributes to the development of the OpenMOLE platform.
