Report of user actions in GUI to piwik.

Objectives
$\rightarrow$ *Expected use of functions ; typical behavior (ex : import mode) ; use of the wizard*
$\rightarrow$ *If user allows extended stats : scripts (how OML is used scientifically), environments*

Implementation
$\rightarrow$ *Injection of piwik script in GUI (OK) ; Custom Dimensions plugins in Matomo*

in standby

Discussion Romain/Mathieu : not too invasive in GUI code $\rightarrow$ use global event listener ; merge of stats for site and gui use ; do not send too precise info (script, data), must be on user voluntary basis.
